FARQUHAR'S POT-GROWN STRAWBERRY PLANTS.

Strawberry
Barrymore.

All the varieties offered are perfect-flowering (bi-sexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollenize their blossoms.

These, if planted in July and August, produce a large crop the next Summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows, one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

FARQUHAR'S "SELECT" VARIETIES

FIRST EARLY.

Alpha. A new, very early variety, producing strong, vigorous plants which are very productive. The fruit is of large size, attractive color and fine quality.

Excelsior. This is decidedly the best early Strawberry and the earliest good Strawberry. The fruit is of round conical form, glossy, dark-red color, and of mildly acid flavor.

SECOND EARLY.

Glen Mary. Large conical, bright red berries; fine flavor.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a better berry than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, and dark red clear to the centre, with a very rich flavor.

MEDIUM.

Barrymore. This fine strawberry was awarded a Silver Medal by the Mass. Hort. Society in 1908, for its excellence. The plants are of strong growth and very productive. The conical shaped berries are of medium size and of a dark, glossy, crimson color; the flesh is a rich red and very juicy.

Big Joe. A magnificent new Strawberry of robust growth and very prolific. The berries are light crimson in color, unusually large and of fine quality.

Marshall. The fruit of this remarkable sort is of enormous size, of handsome, glossy dark crimson color, and of delicious flavor. It is one of the best midseason berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

McAlpin. This new variety was originated in New Jersey and is considered by many growers to be one of the best of the newer introductions. The berries are a beautiful scarlet in color, very large and of rich, luscious flavor. Very productive.

Nick Ohmer. Dark, glossy red globular berries of superior flavor; fine for forcing.

LATE TO VERY LATE.

Chesapeake. The plants of the Chesapeake are large and vigorous with rich dark green foliage. The fruit is of large size, deep red in color and of a rich aromatic flavor.

Commonwealth. This is the latest of all Strawberries; bearing large conical, deep crimson fruit, sweet and of quality equal to the well-known Bubach. Not only an extra large berry, but also very productive; solid and quite juicy.

William Belt. An exceptionally fine berry. In quality it heads the list. The berries are as large, with some specimens larger than the Bubach. Its color is a glossy, deep red; late as Gandy.

William Belt.

POT-GROWN PLANTS of the above "Select" Varieties, from 2½-in. pots, well rooted, delivery in July and August. \$5.00 per 100; \$45.00 per 1000.

POT-GROWN STRAWBERRY PLANTS—Continued.

STANDARD VARIETIES

FIRST EARLY.

Early Ozark. One of the most productive early varieties, producing large dark-red berries of rather acid flavor but very delicious. The plants are of vigorous growth with fine dark-green foliage.

SECOND EARLY.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties.

Sample P. Excellent for either market or home use; prolific, large, firm and delicious.

MEDIUM.

Abington. A strong native variety of recent introduction. The fruit is of large size, bright red in color, very solid; excellent flavor.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper, especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

POT-GROWN PLANTS of the above Standard varieties, from 2½-in. pots, well-rooted, delivery in July and August. \$4.00 per 100; \$38.00 per 1,000.

FALL-BEARING STRAWBERRIES.

The fall-bearing varieties produce fruit at the same season as the ordinary Strawberries, but keep bearing until frost. To get the best results for a late crop, the blossoms must be carefully kept off until July, or the plants will completely exhaust themselves before Fall. If the runners are kept cut during the Summer it will give additional vigor to the late crop.

Progressive. This variety was introduced by Mr. Harlow Rockhill, and is considered by many growers to be one of the best perpetual bearing Strawberries. The fruit is rich and sweet, a deep red inside and out; of good medium size and quite firm.

MEDIUM.

Longfellow. The plants of this fine new variety are of vigorous growth and very productive. Fruit highly colored, conical in shape and inclined to be long.

New York. One of the best sorts for private or market gardens. The berries are large, of conical form, dark red color, firm texture, and of remarkably sweet flavor.

LATE TO VERY LATE.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. On sandy soils it is unproductive.

Orem. A very late fruiting variety of excellent quality, producing an abundance of large, bright red berries of delicious flavor. Excellent variety for marketing.

Rewastico. A very productive new variety. The plants are of vigorous growth with an abundance of dark green foliage and producing uniformly large berries. Color a rich cardinal red, penetrating to the centre.

Pot Grown Plants of the above two varieties, \$7.00 per 100.
